Summary

Result-oriented **Full Stack & AI Developer** with hands-on experience building **AI voice agents**, **LLM-powered workflows**, and **scalable SaaS products**. Proficient in **LangGraph**, **OpenAI integrations**, **real-time systems**, and **ML inference pipelines** (XGBoost). Passionate about shipping **high-performance**, **user-focused applications** with measurable business impact.

Skills

- **Languages & Frameworks:** JavaScript/TypeScript, Python, C++, React, Next.js, Node.js, Express.js
- **AI & Voice:** OpenAI, LangChain, LangGraph, Deepgram, Cartesia, Hume AI, Sarvam, Exotel, Twilio
- **Databases & Queues:** PostgreSQL, MongoDB, MySQL, Redis, BullMQ, Convex, Prisma ORM
- **Cloud & DevOps:** GCP, AWS, Docker, Vercel, Supabase, Git
- **Security & APIs:** OAuth 2.0, Clerk, JWT, RESTful APIs, Server-Sent Events (SSE), WireGuard VPN

Experience

- **Full Stack AI Developer** — *Repaio Technologies Pvt. Ltd. Bangalore, India* June 2025 – Present
 - Built and deployed **real-time AI voice agents** (Riva) using **Exotel**, **Twilio**, **Deepgram**, **Cartesia**, and **Hume AI** for outbound collections and support, achieving a **30% reduction in call handling time** and **25% higher resolution rate**.
 - Rebuilt the **Riva outbound calling platform** end-to-end for B2B clients (banks, NBFCs, fintechs) — engineered backend APIs, campaign orchestration logic, **dynamic variable mapping** against agent-defined schemas, DNC registry management, and a **4-step campaign creation wizard**.
 - Designed **structured AI call flows** with **LangGraph** and a **workflow builder UI** for dynamic multi-step dialogue orchestration; integrated **OpenAI function calling**, reducing prompt failure cases by **20%**.
 - Built an **Attendance & Leave Management System** within the company CRM, cutting leave processing time by **40%**.
- **Full Stack Developer Intern** — *Tokihub (formerly Bioquix) Bangalore, India* Mar 2025 – May 2025
 - Developed the **Agentic platform UI** featuring a **workflow editor**, **AI-powered chat interface**, **analytics dashboard**, and **protein editor** (3Dmol.js), improving user task efficiency by **35%**.
 - Refined UI/UX and delivered production-ready features on the main website, driving a **20% increase in user engagement**.

Projects

- **DriftLogg** 🌐 — *2025*
 - Built a predictive dependency health SaaS that scans GitHub repos, analyzes **6 signal categories** per package, and forecasts abandonment **60–90 days in advance** using **XGBoost**.
 - Architected a fully decoupled async pipeline using **Node.js**, **Python**, **BullMQ**, **Redis**, and **PostgreSQL**, where signal-collection workers enqueue jobs consumed by a dedicated **ML inference microservice**.
 - Implemented real-time onboarding progress tracking via **Redis Pub/Sub** and **Server-Sent Events (SSE)**, alongside multi-channel alerting through **Slack**, **Google Chat**, and **email**.
 - Built a responsive **Next.js** dashboard featuring animated dependency health scores, **90-day survival curves**, and **AI-generated migration recommendations** to guide package transitions.
- **AI Voice Agent** 🗣️ — *2025*
 - Built a real-time AI voice agent achieving **sub-1.2s response latency** and **25% lower operational costs**, using **Twilio** for telephony, **Deepgram** for live speech-to-text, and **OpenAI** for dialogue generation.
 - Integrated **Hume AI's TTS** engine to deliver emotionally expressive voice responses, significantly improving perceived naturalness and realism of AI-driven phone conversations.

Education

- **B.Tech Computer Science & Engineering** — *Vellore Institute of Technology, Bhopal* May 2021 – July 2025
